- ❑ Content filtering is available to ensure a family friendly Internet service
- ❑ Monitor Internet utilization through comprehensive reports
- ❑ Access code API for PoS and PMS applications
- ❑ Remote access and configuration
- ❑ Free Cloud management service

Wireless Internet access is an essential part of doing business for trade show participants and visitors. Booth owners want Internet access to stay in touch with their offices and get access to business information that visitors ask about. Visitors also want wireless Internet for their smart-phones.

Even though many people have 4G/5G smart-phones with Internet access, large events such as trade shows usually swamp cell phone towers, limiting Internet access. Wireless Internet service can be bundled with the booth costs to attract businesses to show their products. Booth owners can have free Internet access while visitors can be charged for Internet access using credit card billing.

**Rent booth space quicker while covering costs: provide free Internet for booth owners and charge visitors for Internet use.**

Cover the cost of providing free Internet for booth owners by charging visitors for Internet services using the gateway credit card billing feature.

Our gateway products include many management features essential for trade show Internet services. Features include bandwidth limiting, peer-to-peer blocking, content filtering and virus blocking. Comprehensive reporting includes daily and monthly usage, and billing reports with transaction charges.
