Community Internet using Starlink: easy to install and operate

Many communities have apartment buildings with limited or no Internet service. The STAR-5 kit is designed to operate with a Starlink antenna to provide a managed Internet service for an apartment building. The Starlink Internet operates almost everywhere in the world and can be shared with residents in a community when the Internet service is managed using a Guest Internet controller. The unique Guest Internet features maintain good Internet performance for many users while ensuring that the Starlink service is used responsibly.

Provide Internet service for an apartment building with the STAR-5 kit and your Starlink antenna

The STAR-5 kit can provide an Internet service for 50 or more residents when connected to a Starlink antenna. The GIS-K5 wireless Internet controllers connect to the Starlink router via the PoE switch included. The GIS-K5 wireless controllers are installed throughout the building to provide good wireless coverage. Additional STAR-5 kits can be added for very large buildings

Guest Internet controllers set rules for Internet access so that the service from one Starlink antenna can be shared between many people, and to ensure that the Starlink data capacity is not exceeded which may result in a service interruption. The rules include the duration of access, maximum data speed, maximum data volume, and time at which the service can be used. Access is provided with a voucher that can be printed using the free Cloud service. The voucher access code has the rules for Internet access. Guest Internet has no other charges and the equipment is very easy to use so it is not necessary to rely on an 'expert' to operate the system, anyone can do it.

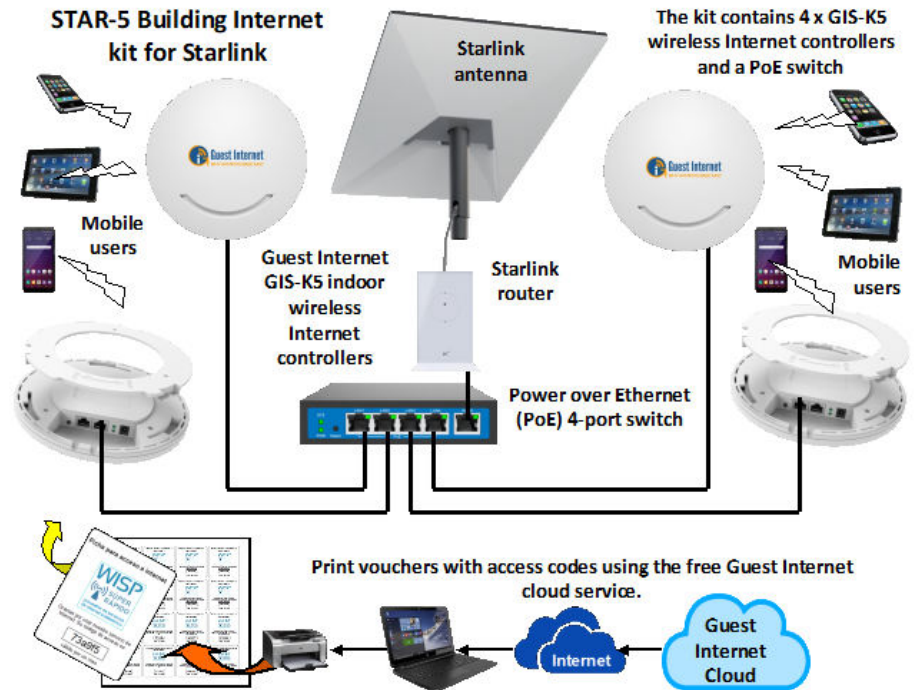

The GIS-K5 wireless Internet controller has all the features that are essential to manage the Starlink Internet service for many users. The STAR-5 kit provides Internet to apartment or office buildings.

Items included with the STAR-5 kit

- ❑ Four GIS-K5 high performance wireless Internet controllers
- ❑ Five-port PoE switch, 4 PoE ports and 1 uplink port that connects to the Starlink router Ethernet port
- ❑ Ethernet cables
- ❑ Free Cloud account to manage the service
- ❑ Print vouchers using the Cloud
- ❑ Complete guide, how to connect, and configure your Internet service
- ❑ **The Starlink antenna is not included**

The installer has to provide the Ethernet cable that connects the PoE switch to each GIS-K5 wireless controller. The GIS-K5's are powered with the 48v PoE switch.

Guest Internet features that manage the Starlink community Internet service

Easy to install and use

Comprehensive instructions and simple products mean that you do not have to depend on others to provide the Internet service

Quick
Start
guide
